

ABENCS

Abener Engineering and Construction Services

Project Engineer:

An energy engineering company (EPC) is seeking a Project Engineer who will be responsible for leading the project strategy and execution. Individual will work on solar power project.

Main Responsibilities/Duties:

- Develop, oversee and monitor solar power execution strategy
- Responsible for leading project strategy and design team, working with the different technical engineering disciplines (mechanical, structural, electrical, civil)
- Interacts daily with project team, vendors, contractors and client concerning engineering and technical issues
- Conducts regularly scheduled design team meetings and model reviewing providing overall support to all aspects of the engineering, design and construction of the project
- Monitor project progress, quality and cost for achieving budget proposal and overall profitability

Requirements:

Individual must have a minimum 10+ years of project management experience with prior experience in solar power. Minimum BS in engineering disciplined required. Prior project leadership experiences a must, with strong communication skills (verbal and written). Prior heavy solar project experience (energy, turbine generator, steam condensate, heat exchangers, pumps, vessels, steam generation, thermal storage, power block, power plant, and boilers) and PE highly preferred.

Abencs offers competitive pay, excellent benefits including medical, dental, vision, 401K matching contributions, life Insurance, tuition reimbursement, short-term and long-term disability, flexible benefits plans, flex time, relocation assistance and a casual working environment.

Abencs is a full service detailed engineering, procurement and construction business headquartered in the metropolitan St. Louis, Missouri area.
